

ThinPrint 10.6 – Simply Better

Simply Better Printing – For All IT Architectures

- ✓ Reduce the burden associated with user support
- ✓ Eliminate bandwidth, server and printer hardware costs as well as reduce paper and toner use
- ✓ Simplify print management
- ✓ Increase user satisfaction with rapid, reliable and accurate printing results

**New: Mobile Session Printing
for iPad and iPhone**

ThinPrint 10.6 Simply Better

The market leader for intelligent, low-cost and stable print solutions

ThinPrint is continually revolutionizing the world of printing with a perfect balance of technological growth and ever improving printing features. To guarantee the highest levels of quality, we rely on the feedback of over **20,000 enterprise customers**, and so, we can proudly say: **ThinPrint 10.6 – Simply Better.**

The leading print management solution **for over a decade**, ThinPrint increases the efficiency of businesses, regardless of their **sector, size, region**, or even their existing IT infrastructure. It is a print solution that is easy to introduce and manage, while considerably **reducing burden on the IT department**. ThinPrint also offers significant **performance improvements, optimal printing support and lucrative cost savings** generated through streamlined printing processes.

ThinPrint Engine 10.6 gives you the power to optimize any printing environment! No matter with or without using virtualization solutions such as Microsoft Remote Desktop Services (Terminal Services), Citrix XenApp, Citrix XenDesktop, VMware Horizon View, or **physical desktops** – the ThinPrint Engine, in conjunction with a print server, **optimizes printing for any IT architecture**. This includes **wide-ranging hardware support**: ThinPrint software is already integrated in over 80% of thin clients and renowned printer manufacturers offer integrated ThinPrint Client software in their devices.

“

ThinPrint has delivered the best print solution for Citrix customers since 1999, ensuring that Citrix users can print any document to any printer wherever they access their Citrix virtual desktop.

ThinPrint 10.6 for Businesses

Significant cost savings with streamlined printing processes

Proven worldwide, through its use in the most diverse IT structures, ThinPrint is used daily by millions of people, in companies of all sizes, in all verticals and in all regions. As an enterprise, you can be confident that with the market leader for intelligently-designed printing solutions, you will benefit from low-cost printing with the best support for every imaginable printing process.

Generate savings in the IT budget through the best **VIRTUAL PRINTER DRIVER:**

Numerous printer drivers make printer administration and support highly complex. This is not the case with ThinPrint. Instead of individual printer drivers on each machine, only one virtual driver, the ThinPrint Output Gateway is required – for every imaginable environment, regardless of the existing printers in place. Advanced printing features can continue to be used, and driver problems are no longer an issue for users or administrators and productivity is significantly increased.

Uninterrupted work through unrivaled levels of **COMPRESSION:**

Maximum compression of print data is essential. In the worst instances, print data can be up to 10 times greater than the original file size. ThinPrint analyzes the specifics of each print job and selects the most appropriate compression method. Only Advanced Adaptive Compression allows us to achieve compression rates of 98% without requiring additional software, needing to purchase hardware or making any changes to your IT environment.

Fewer servers through **SERVER CONSOLIDATION:**

Local print servers in branch offices and subsidiaries can finally be eliminated thanks to ThinPrint. Advantages for your business include: far less management overhead, hardware, energy and operating costs, as well as the fully-optimized use of your existing IT resources.

All print jobs realize the highest **SECURITY STANDARDS:**

ThinPrint transmits print data end-to-end via SSL encryption. Sensitive business information is fully protected even when printing. This is especially important for branch offices and home office workers. In addition, VPN connections are no longer needed.

Full control of **PRINTING COSTS:**

The ThinPrint Tracking Service monitors the entire print environment and records printing operations throughout the business. The main cost-drivers of printing can be easily identified and ultimately eliminated.

ThinPrint for Administrators Simplified print management for every environment

With ThinPrint, benefit from a printing system which is seamlessly integrated into your existing IT architecture.

Unmatched **DRIVER FREE PRINTING:**

Thanks to integrated V-Layer™ technology, no printer drivers are required on desktops or the remote desktop server. The ThinPrint Output Gateway saves on unnecessary administrative overhead and eliminates unstable print processes, whilst still supporting advanced printing options.

Significantly fewer **HELPDESK-CALLS:**

Support calls are greatly reduced thanks to Driver Free Printing, rapid printouts and the highest levels of quality.

Connection-oriented **BANDWIDTH-CONTROL:**

Define the maximum allowable bandwidth per location and not per user. Even if multiple employees print large documents simultaneously, print data never exceeds the allowed bandwidth.

Convenient **PRINTER MAPPING:**

Whether a remote session, session-in-session printing or a virtualized desktop session: the automatic mapping of both local and network printers is fully supported and the user is always assigned the correct printer.

Smooth **BATCH-PRINTING:**

Off-site generated print streams are seamlessly integrated into Citrix XenApp or Microsoft Remote Desktop Services environments.

Automated print management for **COMPLEX ENVIRONMENTS:**

Automated management takes over the entire setup and adjustment of the print environment. This is a huge time-saver especially in large print environments and when changes are made to the corporate IT structure.

ThinPrint for Users Reliable, rapid and flexible printing

From an employee perspective, printing should be fast, reliable and always of the highest quality. With ThinPrint, this is always achievable no matter how individualized the specific IT environment is.

Intuitive printing with

MOBILE PRINT:

Easily print to local printers via iPads or iPhones from remote sessions and virtual desktops.

User friendly PRINTING:

You always have a uniform and clear print dialog and the correct printer, no matter where you initiate your print job. This includes finishing options like hole-punching, stapling and binding.

The fastest printing solution in the WORLD:

Quickly retrieve your printout without any delay! That's not a problem with ThinPrint printing starts immediately after initiating the print job, and not only when the entire print job has been rendered.

Optimized

PRINTING RESULTS:

ThinPrint font management means even rarely-supported fonts and special characters are always printed without a loss in quality.

Always the best PRINTER SELECTION:

You are always able to access the correct printer – regardless of whether you are in the corporate office, branch office or your home office. Finding the right printer is no longer an issue!

Trouble-free support of

WORKFLOWS:

Thanks to the VirtualCopy feature, you can print to multiple printers, in multiple locations with just a single click.

Over 20,000 satisfied Corporate customers

Ryanair wanted to introduce a centralized Terminal Server farm, and therefore chose the ThinPrint Engine. The result was faster, more reliable and uninterrupted printing process at all its airport bases.

"It's reliable, disruption free and ensures real time printing — no crews have complained of delays with printing."

Derry Kissane, Ryanair

Iveco launched an application virtualization drive for its datacenter. They chose ThinPrint for the integration of the printing processes in order to compress print data and to provide seamless support for their 64-bit environment.

"Bandwidth monitoring works extremely efficiently and is faultless. Printouts appear without delay in the branch offices and without restricting other services."

Alexander Nindel, Iveco
